Passion Project: _Note-To-School_

Note-To-School is a mobile application designed for school administrators and parents to report absences, early dismissals, and bus changes – all in one place!

Using Note-To-School, school administrators can choose how late into the day the parent can make changes to their child schedule. Parents use the application to provide instructions until the time limit set by admins. All changes are automatically sent in email reports to the admins. The application can generate different reports based on the type of change – such as sick absence report by 9am and early dismissals/bus changes by noon, etc.

This app takes less than 5 minutes for the administrators to configure and it's easy for parents to understand. My app will streamline the dismissal process, eliminate confusion, and put the safety of students first.

This application will be developed using SpringBoot, Java, MySql and React front-end application.
